

**Are you CMMC ready?
Are you NIST SP 800-171 compliant?
Do you have the resources & expertise you need to get there?**

Department of Defense (DoD) contractors play an integral role in the Nation's cybersecurity efforts and are responsible for protecting the confidentiality and integrity of Controlled Unclassified Information (CUI). To ensure this responsibility is upheld, contractors are currently required by law to comply with NIST SP 800-171 and, in the near future, the Cybersecurity Maturity Model Certification (CMMC) on a contract basis. Working with an independent partner to conduct a CMMC Readiness Assessment will help your organization meet the requirements necessary to comply with the DoD's standards for its contractors, including NIST SP 800-171 and CMMC.

The Purpose of CMMC

The CMMC is designed to assess and strengthen national security by ensuring contractors and sub-contractors handling CUI have appropriate levels of cybersecurity practices and processes in place. Built upon existing regulation (DFARS 252.204-7012 and NIST SP 800-171), the CMMC is designed to provide additional assurance to the DoD that a contractor is taking appropriate measures to protect CUI at a level corresponding with the identified risk.

CMMC Readiness Assessment

Contractors and sub-contractors can take a proactive approach to CMMC compliance by engaging with an independent partner to conduct a CMMC Readiness Assessment based on DFARS 252.204.7012, including NIST SP 800-171 requirements and the latest version of CMMC. Leveraging an independent partner's assessment experience and expertise to guide your strategic CMMC goals will help your organization avoid pitfalls related to complex requirements.

DTI Cyber Experience and Expertise

DTI's team of cybersecurity and cyber assurance experts has years of experience in providing assessment services for DoD contractors, State and Federal government entities. DTI is a verified woman owned Service Disable Veteran Owned small business. DTI is competent in compliance from FedRAMP to ICD-503, and CMMC. Our goal is to get you certified in the most effective and secure manner possible while managing the bottom line.

A CMMC Readiness Assessment will:

- Propel your organization into a stronger cyber hygiene state to support contracts.
- Prepare your organization to meet upcoming CMMC requirements.
- Demonstrate and Validate your organizations cybersecurity strategy.

Our Assessment Methodology:

- 1** Work with you to determine your CMMC level.
- 2** Evaluate your current policies against the practices needed to meet CMMC standards.
- 3** Provide comprehensive analysis detailing identified gaps between current processes and practices and determined CMMC level requirements.
- 4** Provide remediation roadmap to assist in achieving determined CMMC level readiness or provide a turn-key solution that meets the standard
